

PRATHAM CAR CARE

Multibrand Car Service

ALL TYPE OF 4 WHEELER SERVICE & REPAIR

Address: Near Vedant Mangalam, Vedant Nagari, DP Road, Karvenagar, Pune - 52

Call: 9011560540 / 9665939486

1. Technical Development Specifications & System Architecture

This specification sheet defines the production architecture for the **Pratham Car Care Garage Management Progressive Web Application (PWA)**. Due to structural constraints in cross-platform environments where source builds originate on Windows desktop terminals but target user execution remains locked to client iOS mobile viewports, this framework relies on compiled **React Native for Web** files securely deployed to **Hostinger Shared Server Architecture**. The runtime interfaces communicate explicitly with a native **PHP 8.x backend layer API** linked to a centralized **MySQL persistence ledger**.

Operational requirements dictate an **open ad-hoc pricing ecosystem**. To support rapid workflow updates inside busy mechanics bays, line item prices and item quantifiers remain fully flexible and are calculated dynamically during the manual assembly of unique customer receipts, bypassing fixed master table variables.

2. Immutable Relational Data Catalog Schema (SQL)

To initialize the Hostinger database infrastructure, execute the following data definition scripts inside the target phpMyAdmin cluster interface. The relational mappings utilize cascading foreign references to preserve accounting logs across multiple transactions.

```
CREATE TABLE vehicles (  
  id INT AUTO_INCREMENT PRIMARY KEY,  
  plate_number VARCHAR(50) UNIQUE NOT NULL,  
  owner_name VARCHAR(255) NOT NULL,  
  owner_phone VARCHAR(20) NOT NULL,  
  created_at TIMESTAMP DEFAULT CURRENT_TIMESTAMP  
) ENGINE=InnoDB DEFAULT CHARSET=utf8mb4;  
  
CREATE TABLE invoices (  
  id INT AUTO_INCREMENT PRIMARY KEY,  
  vehicle_id INT NOT NULL,  
  total_amount DECIMAL(10,2) NOT NULL,  
  created_at TIMESTAMP DEFAULT CURRENT_TIMESTAMP,  
  FOREIGN KEY (vehicle_id) REFERENCES vehicles(id)  
) ENGINE=InnoDB DEFAULT CHARSET=utf8mb4;  
  
CREATE TABLE invoice_items (  
  id INT AUTO_INCREMENT PRIMARY KEY,  
  invoice_id INT NOT NULL,  
  product_name VARCHAR(255) NOT NULL,  
  quantity INT NOT NULL DEFAULT 1,  
  unit_rate DECIMAL(10,2) NOT NULL,  
  charged_amount DECIMAL(10,2) NOT NULL,  
  FOREIGN KEY (invoice_id) REFERENCES invoices(id) ON DELETE CASCADE  
) ENGINE=InnoDB DEFAULT CHARSET=utf8mb4;
```

3. Pre-Seeded Product & Service Master Catalog

The following master list enumerates the 34 native diagnostic operations and mechanical consumables transcribed from physical job cards. These definitions are seeded into the global lookahead indexing buffer to enable real-time form auto-completion:

1. Engine Oil	2. Oil Filter
3. Oil Flush	4. Oil Treatment
5. Coolant	6. Gear Oil
7. Throttle Body Cleaning	8. Injector Cleaning
9. Brake Oil	10. Brake Cleaning
11. Brake Pad	12. Brake Liner
13. Brake Wheel Cylinder	14. Disk Cutting
15. Drum Cutting	16. Servicing
17. Washing & Cleaning	18. Brake Booster
19. Master Cylinder	20. Clutch Set
21. Clutch Bearing	22. Fly Wheel
23. Clutch Labor Charge	24. Head Repairing
25. Block Repairing	26. Piston Ring
27. Head Gasket	28. Packing Set
29. Oil Seal	30. Oil Pump
31. Water Pump	32. Boss Pump
33. Wheel Bearing	34. Head Light

4. Production Digital Invoice Interface Blueprint

The system UI replicates the structural rendering metrics of the physical billing layout, implementing standard itemization parameters alongside responsive scale layouts optimized for mobile devices:

Sr. No.	Particulars	Qty	Rate (₹)	Amount (₹)
1	Engine Oil (Synthetic Premium)	4 Ltr	850.00	3,400.00
2	Oil Filter Element	1 Unit	450.00	450.00
3	Washing & Diagnostic Cleaning	1 Job	500.00	500.00
TOTAL				₹4,350.00

5. External Telemetry: WhatsApp Router & Google Review Integration

To bypass the capital requirements of metered WhatsApp Business APIs, dispatch channels utilize native web container deep-linking schemas. Upon transactional confirmation, the application serializes the data array and encodes

it into a localized uniform string format.

Google Local Business Feedback Integration: Incorporated into the footer of the receipt string is an automated redirection node targeting the Google Review platform (via https://search.google.com/local/writereview?placeid=YOUR_PLACE_ID). This element routes client engagement directly into local map index profiles immediately after bill clearance.
